

## Release notes WinFSS

### Release notes WinFSS 1.1.0.17

dated 11-10-2005 :

- Added many new fans to the database
- Removed obsolete fans from the database
- Fixed bug in gas mixture section. Specific mass of the mixture was calculated incorrectly
- New company logo in splash screen
- Fixed bug with fixed speed/factor selection

### Release notes WinFSS 1.1.0.9

dated 12-12-2002 :

- Improved Info screen
- Added fan options (high temp./gastight) in database
- Improved window redraw in graph screen
- Fixed several printing issues
- Added line thickness in Graph settings screen
- Bottom margin now set to zero. Some printers (like HP 2100) have problems with this when set to 1 (Text on bottom of page would print through the fan position figures). Set this value to 1 if your printer leaves a bottom margin of approx. 5 mm on the print when using the zero value.
- Several bugs fixed
- Fixed issue with the Borland Database Engine when installing WinFSS. For some reason the Database alias could not be created in the config file.
